

CYLEONE

One line pitch:

Cyleone provides its users the means to address actual environmental and climate related challenges with efficient and cost effective solutions thanks to CYManager and CYbox.

Market Analysis:

Cyleone has segmented his market through two axes, the renewable energy market and the drone operators. Those represent the vertical and horizontal markets. Facing the energetic transition needs and objectives, CYLEONE has oriented its market choices towards: The inspection and maintenance of renewable energy plants, with photovoltaic plants as a first priority. The number of national and international inquiries, the existence of historical partnership between CYLEONE and plants operators and owners and, finally, the firm orders received by CYLEONE way before the product official release on the market. Add to this, from a horizontal point of view, the drone operators try to reach to a largest markets diversity, where CYLEone solutions can help in terms of Time to Market.

Business Proposition:

Cyleone proposes an industrial solution helping to collect and process a large variety of environmental datas. This powerful and effective smart object allows a data mining from a autonomous platform offering an easy to connect plug-and-play sensors, named CYbox, and a smart application, named CYManager. From a business global approach, CYLEone sets his strenght on material and software evolutivity but also on recurrent earnings thanks to services (formation, specific sensors integration and dedicated applications) who will going to allow to extend proposed solutions to its users. In addition to CYBox and CYmanager, Cyleone be seconded financially on subsidies for innovation and product HELIAFOOD to manage the data in the agri-food sector dedicated to traceability and management of non compliance of seafood .

Competitive Advantage:

CYBox and CYmanager, totally independant of the vectors drone, is able to quickly address to the data acquisitions with the most appropriated vectors solution. And even supply an efficient technology to respond to a new market segment, where the drone can become just a ponctual vehicle. The evolutivity of sensors and the data's analysis are unlimited in regards a homogeneous solution, the industrial needs and the normative requirements. So, Cyleone sets itself apart its competitors thanks to: - Combination of data and measures can be treated instantly without interruption - CyBox-Cymanager is a solution with a global approach - Plug and Play system - Interoperate solution but independant of drone - Strong positioning on related services (equipment, training, saas mode)

Investment Attractiveness:

IP Situation:

Cyleone owns two patents which, respectively integrates its modular system of sensors system and hardware int eroperabilit e .
