

KREG AEROSPACE

One line pitch:

We are working on a system for the safe take-off, tracking and landing assistance of an UAV in order to deliver a package in downtown.

Market Analysis:

The market of the drone took time to structure itself, since it suffered at the beginning of a segmentation military / playful drone. The high cost of the first professional-grade machines remained a brake on the market's explosion. As there is a law of Moore on this market as it was the case with telephony, the costs improve with the performances and therefore uses. This specificity paradoxically makes the drone market an Eldorado announced on which uses are to be structured, opening simultaneous opportunities for a growing need for pilots, embedded technologies, structuring of uses and contracts of services

Value proposition:

KREG AEROSPACE intends to position itself on the development of hardware and software solutions, but also to develop its own specific training center, which will enable it to increase in technical solutions and fleets of pilots who will master them, mix that will give birth to the third pillar which is the provision of professional and commercial services. It is this human and technological approach that will allow KREG AEROSPACE to mesh the French territory, initially, then European, with a powerful mapping of points of presence, technical supports, equipment fleet and experts available.

Business Model:

KREG AEROSPACE plans to build partnerships with the High Mountain Police Battalion for the use of post-avalanche drones and firefighters in the paca region to fight fire and rescue at sea. He is also working on a partnership with one of the French leaders of defibrillators, which aims to be able to deliver emergency devices at the scene of cardiac incidents. And on the future of the delivery by drones, the delivery of which should primarily concern the delivery of medicines in hard-to-reach areas. Brainstorming will be carried out with Founders Ventures fund partners: The La Poste Group and a start-up of perishable pharmaceutical logistics management in tight flows between hospitals.

IP and Regulatory situation:

Preliminary study completed, Projet in pre-launch phase of prototype development, Not yet patent filed.
