

SEZAM LABS

One line pitch:

Sezam Trust is a full-fledge Trust-as-a-Service solution providing with the necessary features for conceiving modern trust-centric applications.

Market Analysis:

In the minds of people, future software-based economies and societies still lack of digital trust to gain acceptance. Built on top of a unique crypto-ledger and formally proofed smart contract solution, Sezam Trust is a full-fledge Trust-as-a-Service solution providing with the necessary features for conceiving modern trust-centric applications. The major growth drivers of the Blockchain market are, transparency & immutability, faster transactions, and reduced total cost of ownership. Payments application holds the largest share of the Blockchain market in 2016. The need for banking and financial transactions has evolved from traditional payments systems to be seamlessly integrated into new and always connected lifestyle which is fueling the growth of Blockchain-based payment solutions.

Value proposition:

At Sezam we propose a trust-as-a-Service (TaaS) solution. We deliver a software suite can be embedded into a variety of finance application. We make business safer with: - Lower implementation costs than IBM or others competitors - Very simple to integrate in our clients businesses with our APIs - Available to work in unstable and lossy networking environments - Highly scalable. Sezam is able processing millions of transactions/second - Homomorphic encryption. We can manipulate data without decrypting them Moreover, Sezam Trust will be the first centric zero knowledge proof application. In fact, we can prove that a smart contract between 2 persons.

Business Model:

Our business model is very simple, based on the data consumption of our clients. We've 3 offers level: Makers: 129€/month for 1 000 000 requests Start Ups: 649 €/month for 5 000 000 requests Companies: 1299 €/month for 10 000 000 request Also, for special projects we can adjust our offer on demand.

IP and Regulatory situation:

During our fundraising, VC wanted an intellectual property study about our technology. It appears that there is a patent protection potential in the ID control system. In Fact, it's possible to integrate our Smart Identity solution in many kind of devices, like, smart watch, wristband, CB, etc. For payments, we are the only one company which hold a double exemption on payment facility and electronic money within the meaning of DSP (Directive des services de payments). ??Moreover, we are working on a full agreement delivered by ACPR and Banque de France allowing us to manage money without banking supports (1st Quarter 2018).
