

WEEN SAS

Innovative Tech (Digital - IT - Robotics - IoT - Smart City)

One line pitch:

The world's first geodriven smart thermostat that drives significant energy savings in real-time.

Market Analysis:

According to the French national energy board in France alone if we all turned down the temperature each time we leave home that would lead to energy savings of 4 Bn€ per year.

Business Proposition:

Ween is the first free-standing smart thermostat that reacts in real-time to maximize energy saving for all our absences planned or unplanned, in a frictionless and userless manner.

Competitive Advantage:

Ween is in the magic quadrant based on our in-house technology and its powerful microprocessor core. Its machine-learning ability allows it to maximize our energy savings.

Investment Attractiveness:

Ween's patented technology is unique and will allow it to gain traction in the nascent but fast growing market for Home Energy Management Services. Its powerful microprocessor is designed to accommodate future subscription value-added services. Our technology is also easily scalable for future deployment in smart office buildings and hotels.

IP Situation:

Ween filed a patent for its real-team geodriven technology in July 2014 and filed for the PCT in July 2015.
